In a discussion with Inventables user Benjamin Hernandez, we are looking back on some of our favorite products from the last 25 years. You can find his final recommendations in this original post. 1. Electric Eggplant I chose the first product I ever bought with my own money. I'm a vintage nerd, so I found my first ever phone call service at the local thrift store. After a few phone calls and a tense moment, I bought a Yellow e-eggplant (aka e-Cel) phone for $12.99. It was a brilliant invention back then. E-Cel was an eggplant shaped handset that you plugged into the wall socket. A few minutes later, the voice dialing feature would ring and you'd be able to pick up a call from your contacts without even knowing the number. It was the first affordable true telephone (instead of a rotary dial). Unfortunately, it didn't have any of the neat features you would expect today like caller ID, but at $12.99 it was an amazing bargain. I loved that phone and would always go out of my way to find one. I eventually ran out of space in my bedroom so I moved into my bedroom/office and had the phone wired to the wall. But the phone just wasn't as practical there. I'd get a call on it and have to shut down my computer to take the call. If you were lucky, you might

have been able to reach someone before the call was placed, but the odds weren't in your favor. I never had any luck getting the call back after it had been placed. I was bummed when E-Cel went out of business, but luckily the whole phone service market has exploded since then and there are plenty of phone systems available today. 2. iPhone I waited for the iPhone to go on sale at my local electronics store. It was the best phone ever at the time. Apple built a phone that was so simple to use that it literally took me two minutes to get set up. At first I was afraid to make a call on it, because it could be turned off at any time, but when I actually did make my first call, it was a huge relief. I don't think there has ever been a more perfect example of a polished user experience for a mobile device. It was perfect from the first use and it didn't let
