What's New in the SoundFrequencyMapperFFT?

- FFT length - Mapping type - FFT size - FFT offset (to block-overlap with the next block) - FFT frame size - Frequency range Using SoundFrequencyMapperFFT you can switch the FFT length (in steps of 4, 8, 16... up to 1024) and the block-size (in steps of 1, 2, 4... up to 16384). You can also switch the frequency range which determines the values that will be used as input to the FFT function. SoundFrequencyMapperFFT is ideal for analyzing how a certain sound source (human voice, music, drum beat or the like) affects the sound card's sound frequency range. E.g. with SoundFrequencyMapperFFT you can: - Realize what is the difference between two sound sources in the sound frequency range - Find out the frequency range that allows you to hear the difference between two sound sources - Realize how much we need to change the FFT length and block size for a new "acceptable" frequency range. SoundFrequencyMapperFFT Features: - Adjustable FFT length and block size - Type of mapping (normal, resonance or comb) - Normalize sound card output to -1 to +1 - Adjustable frequency range - Selectable frequency range for the FFT function - Setting FFT Offset to block-overlap with next block SoundFrequencyMapperFFT Screenshot: Click this link to view a screenshot of SoundFrequencyMapperFFT: Software Details: - It's a freeware software - It's available for Windows, but the software has been tested on Windows OS only - SoundFrequencyMapperFFT is a stand-alone application and it can be used without other Windows applications - It's currently the only software in the world that can do something similar to what you are looking for - SoundFrequencyMapperFFT is a freeware application and it is released under the GNU GPL - SoundFrequencyMapperFFT is a portable software and can be used on multiple operating systems like Windows, Linux and Mac - SoundFrequencyMapperFFT can be used for research and development purposes, teaching, learning, learning, generating new ideas
