Will history repeat itself? The Fed slashed short-term interest rates to 0.25 percent and extended its bond-buying program known as quantitative easing to \$500 billion, in response to the housing bust and the financial crisis of 2007-2009. Housing activity has been slow since then, although sales have risen and prices are on the rise again. On the other hand, the Fed could also be seen as being fairly stimulative. While many economists think the economy is not expanding at a fast enough pace, the bond purchases are widely viewed as a form of stimulus that helps push the economy forward. The other factor that could weigh into the Fed's decision is the size of the U.S. budget deficit. The Congressional Budget Office projects a deficit of \$1.011 trillion in 2011, a sizable jump from \$443 billion in 2010. If the deficit increases, it could put additional pressure on the Fed to let interest rates rise, especially if the growth in the deficit comes
